Rationale:  
Asthma affects up to one in four primary aged children, one in seven teenagers and one in ten adults. It is important therefore for all staff members to be aware of asthma, its symptoms and triggers, and the management of asthma in a school environment.

Aims:  
To manage asthma and asthma sufferers as effectively and efficiently as possible at school.

Implementation:  
- Asthma attacks involve the narrowing of airways making it difficult to breathe. Symptoms commonly include difficulty breathing, wheezy breathing, dry and irritating cough, tightness in the chest and difficulty speaking.
- Children and adults with mild asthma rarely require medication, however severe asthma sufferers may require daily or additional medication (particularly after exercise).
- Professional development will be provided annually for all staff on the nature, prevention and treatment of asthma attacks. Such information will also be displayed on the staffroom wall.
- All students with asthma must have an up to date (annual) written asthma management plan consistent with Asthma Victoria’s requirements completed by their doctor or paediatrician. Appropriate asthma plan proformas are available at www.asthma.org.au
- Asthma plans will be attached to the student’s records for reference.
- Parents/guardians are responsible for ensuring their children have an adequate supply of appropriate asthma medication (including a spacer) with them at school at all times.
- The school will provide, and have staff trained in the administering of, reliever puffers (blue canister) such as Ventolin, Airomir, Asmol or Bricanyl and spacer devices in all first-aid kits, including kits on excursions and camps. Clear written instructions on how to use these medications and devices will be included in each first aid kit, along with steps to be taken to treat severe asthma attacks. Kits will contain 70% alcohol swabs to clean devices after use.
- The first aid staff member will be responsible for checking reliever puffer expiry dates.
- A nebuliser pump will not be used by the school staff unless a student’s asthma management plan recommends the use of such a device, and only then if the plan
includes and complies with section 4.5.7.3 of the SOTF Reference Guide - Asthma Medication Delivery Devices.

- All devices used for the delivery of asthma medication will be cleaned appropriately after each use.
- Care must be provided immediately for any student who develops signs of an asthma attack.
- Children suffering asthma attacks should be treated in accordance with their asthma plan.

If no plan is available:

**Step 1** Sit the person upright, stay calm and offer reassurance. Do not leave the person alone.

**Step 2** Without delay, give four separate puffs of a blue reliever* (Airomir, Asmol, Epaq or Ventolin).

The medication is best given one puff at a time via a spacer device.

Ask the person to take four breaths from the spacer after each puff of medication.

If a spacer is not available simply use the puffer on its own.

**Step 3** Wait four minutes.

If the person's condition suddenly deteriorates or you are very concerned, call an ambulance immediately (Dial 000).

**Step 4** If there is little or no improvement repeat steps two and three.

If there is still no improvement call an ambulance immediately (Dial 000).

Continue to repeat steps two and three while waiting for the ambulance.

* A Bricanyl Turbuhaler may be used in first aid treatment if a puffer and spacer is not available

The school is registered as an asthma friendly school and will ensure that this registration remains current on a three yearly basis and will undertake as required the requirements for maintaining this registration - www.asthmafriendlyschools.org.au

**Evaluation:**

This policy will be reviewed as part of the school's review cycle in 2015.

SCHOOL ASTHMA ACTION PLAN

This record is to be completed by parents/carers in consultation with their child’s doctor. Please tick the appropriate box and print your answers clearly in the blank spaces where indicated. This school is collecting information on your child’s asthma so we can better manage asthma while your child is in our care. The information on this Plan is confidential. All staff that care for your child will have access to this information. It will only be distributed to them to provide safe asthma management for your child at school. The school will only disclose this information to others with your consent if it is to be used elsewhere. Please contact the school at any time if you need to update this Plan or you have any questions about the management of asthma at school. If no Asthma Action Plan is provided by the parent/carer, the staff will treat asthma symptoms as outlined in the Victorian Schools Asthma Policy (Section 4.5.10.3 of the Department of Education and Early Childhood Development Victorian Government Schools’ Reference Guide).

Managing Exercise Induced Asthma (EIA)

Students with asthma are encouraged to take part in school based exercise and physical activity to contribute to their cardiovascular fitness and general wellbeing. Most individuals with EIA can exercise to their full potential if the following steps are taken:

1. Students should take their blue reliever medication 5-10 minutes before warm up, then warm up appropriately.

2. If the student presents with asthma during the activity the student should stop the activity, take their blue reliever medication and wait 4 minutes. If the symptoms improve, they may resume activity. If their symptoms reoccur, recommence treatment. THE STUDENT SHOULD NOT RETURN TO THE ACTIVITY UNDER ANY CIRCUMSTANCES and the parent/carer should be informed of any incident.

3. Cool down at the end of activity and be alert for asthma symptoms after exercise.

Does the student need assistance taking their medication? Yes No If yes, how? __________________________
